The Quite Lite Tail Feather Camper Kit:

I like this small camper kit, because it has several survival advantages over other campers.

The Tail Feather Camper kit by Quite Lite assembles on any 5 x 8 foot utility trailer.

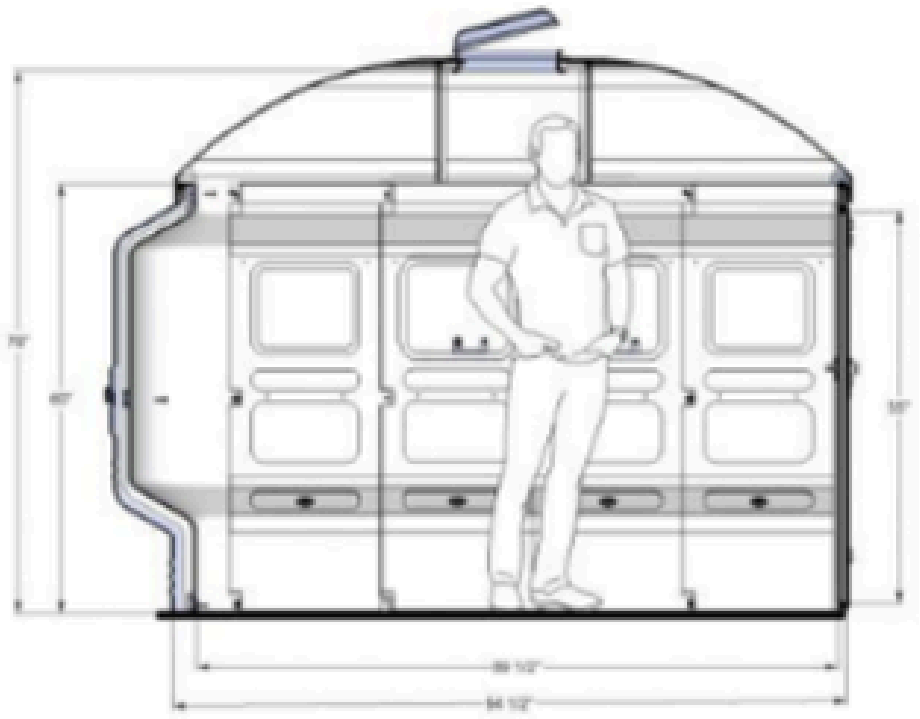
Home Depot sells this 5 x 8 Karavan utility trailer, perfect for the tail feather camper kit.

The tail feather kit is a set of insulated panels, that connect to form the camper shell.

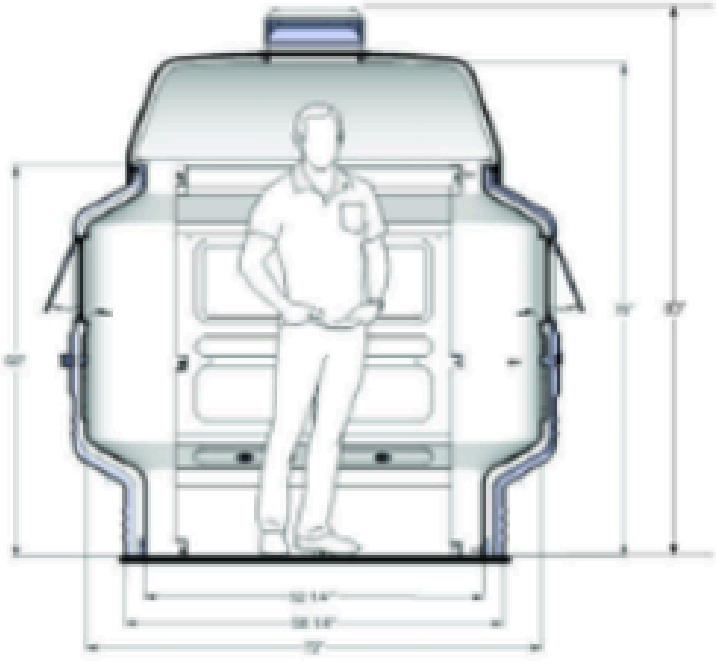
One person can assemble the tail feather in about one hour, with just a power screwdriver.

The tail feather camper shell weigh approx 350 lbs, and the Karavan trailer is also 350 lbs.

So even vehicles that can only tow 1000 lbs can pull it, along with 300 lbs of camping gear.

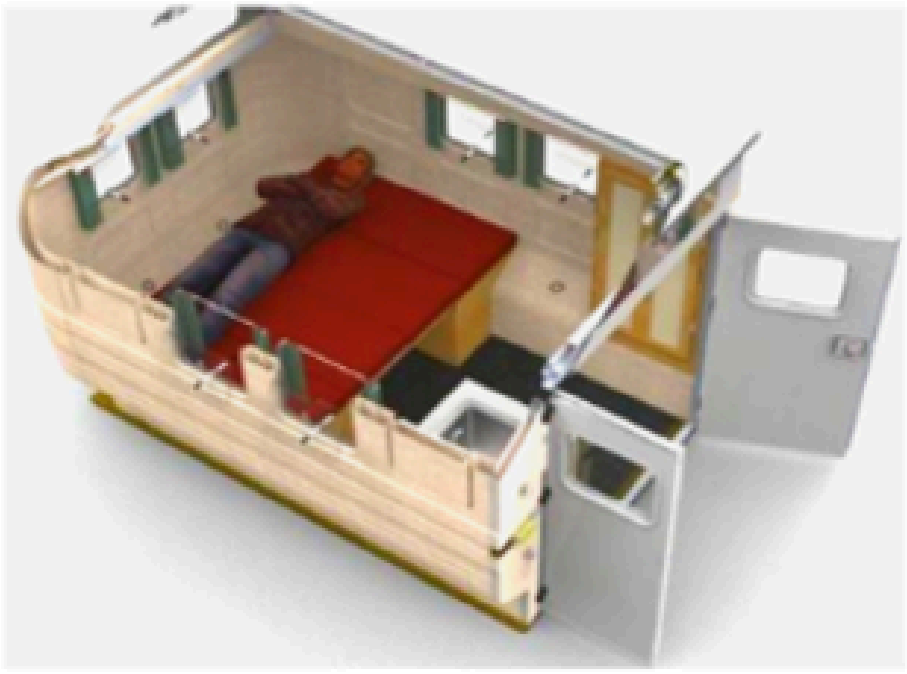


Side View Sketch - The camper is tall enough to stand upright inside.



End View Sketch - The camper is 5 ft x 8 ft at the base, but the walls curve outwards, giving it a full 6 feet of useable interior width, and just over 8 ft of useable interior length.

The assembled tail feather camper has a totally open floor plan, so it can also be used as an enclosed cargo trailer when desired, giving it more functionality than a dedicated camper.

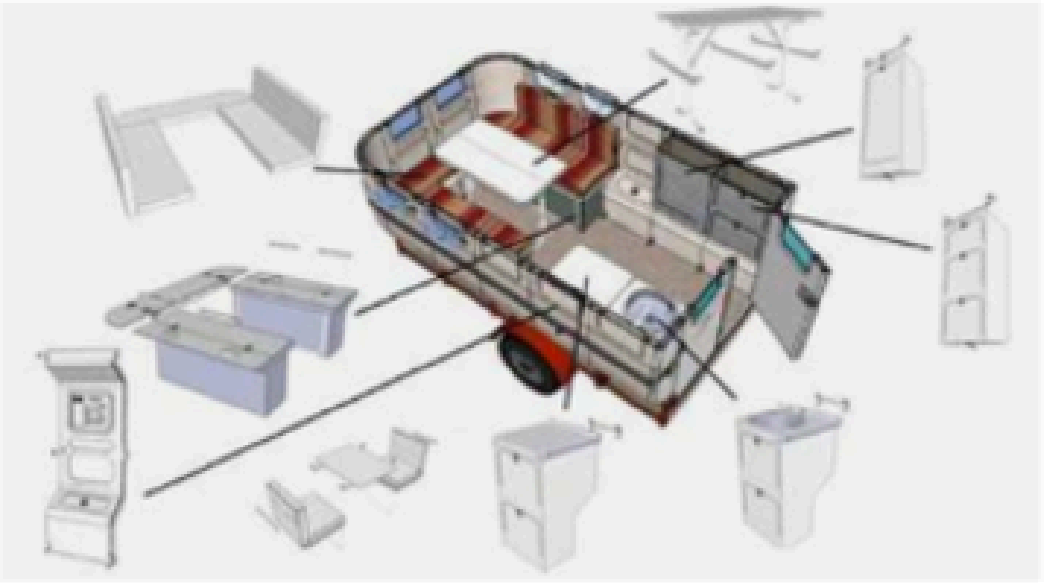


Several optional furnishings are available, including a convertible dinette / bed assembly.

This is the dinette (with under-seat storage) but quite lite has improved the table design.

And here the dinette is shown laid out in the bed configuration.

The bed is 6 ft wide, and will sleep two people of average height comfortably.



The furnishings are all modular, and can be removed or repositioned, as needed.

This is how the interior looks, with all of the optional furnishings installed.

Notice the improved table design, which eliminated the support pipe, from earlier version.

The optional furnishings include a basic sink module with a water container and pump faucet, a hanging wardrobe module, and counter modules that have storage underneath.

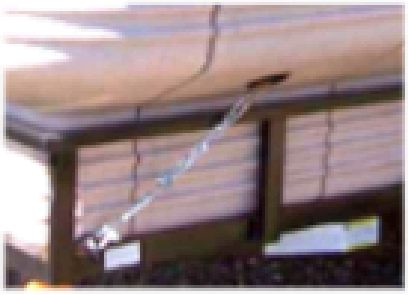
The large rear double doors make it easy to load and unload items.

The tail feather can also be used as a small toy hauler, for a dirt bike, or smaller atv.

A dirt bike will fit in the space between the dinette seats, without having to remove them.

Costing just over $5000 (plus trailer), the tail feather is an excellent multi-use camper.

The tail feather is so lightweight that it should be secured to the trailer, with turnbuckles.

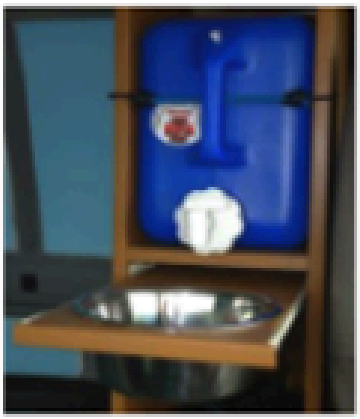


And although I prefer the double rear door version, a side door option is also available.

So you may have noticed that the tail feather is a simple camper shell, and it does not have a bathroom, or running water, or a kitchenette with oven and microwave and refrigerator.

This is the type of camper that I prefer, an enclosed shelter that you can stand upright in, with room to sleep, and with privacy for using a portable toilet, or changing your clothes.

You also don't have to buy any of the modular furnishings that are available for this camper, because you can substitute other versions, if you prefer. Here are some examples.



Improvised water supply with sink, butane camp stove, and one type of portable toilet.

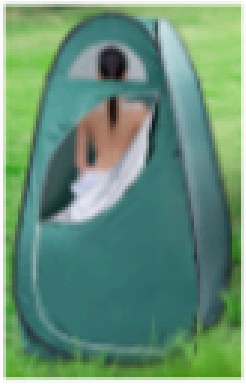
There are several ways to provide the basic camping needs of water, food preperation, and sanitation and personal hygiene. Here are a few more examples that you can choose from.

Here are two versions of water containers, that sre also set up for hand washing.

Butane camp stoves use replaceable gas cylinders, and come in one and two burner styles.

Another option is to cook your food outdoors on camp wood stoves, or in dutch ovens.

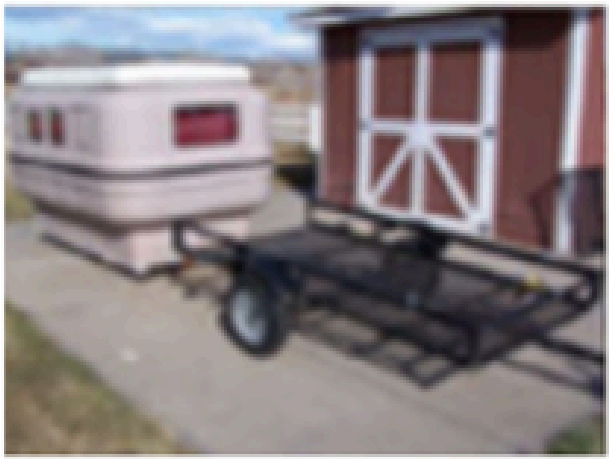
And there are several types of simple camp toilet designs available.



Here are a camp sink, a solar shower, a garden sprayer shower, and a pop-up shower tent.

One way to wash clothes is with this scrubba wash bag, but any dry bag can also be used.

These collapsible sinks are a handy way to wash your camp dishes, after meals.



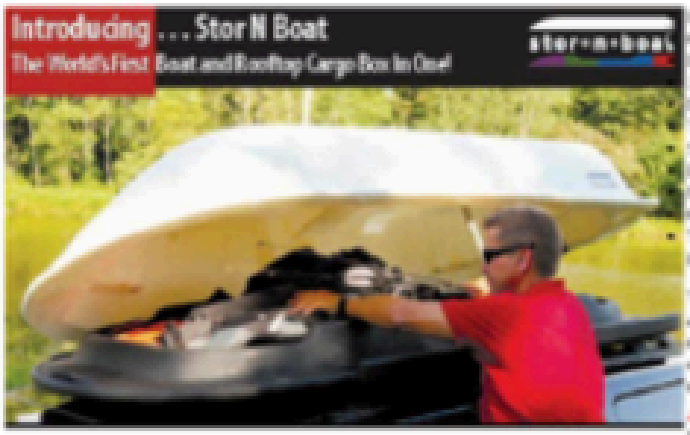
Since the tail feather camper only weighs 350 lbs, it is easy to slide it off the utility trailer, whenever you may want to use the trailer for other tasks. This also adds to the usefulness of this setup, since you can use the camper shell on the trailer as an RV, or you can drop the camper shell in your favorite camping spot, then use the trailer to haul in firewood, or other supplies. You could also place it at your deer hunting site, for use as a hunting blind.

So altogether we have a setup that can be used for RV camping, or toy hauling, or hunting.

And it costs considerably less than most other campers, so I find it extremely appealing.

If you need a larger shelter, quite lite also sells this 10 ft x 10 ft quick cabin kit.

The quick cabin assembles from the same type of insulated panels used in the tail feather.



Boat dimensions: 42" W x 96" L x 10" D
Overall height (with base unit): 17.5"
Boat weight: 98 lbs. (w/o seats), 114.7 lbs. (w/ seats)
3 seats (removable)
Base unit weight: 30 lbs.
Total weight: 152.7 lbs.
Storage base cargo capacity: 14.7 cubic ft.
Boat maximum horsepower rating: 2 HP
Boat maximum weight capacity: 2 people 450 lbs.
